

Internet and Wireless

How do I connect to the Carthage-Secure network on a Mac?

1. Make sure your wifi is on.
2. Two SSIDs are available on campus. Carthage-Open and Carthage-Secure. Choose Carthage-Secure.
3. You will be prompted by your OS to authenticate to the network. You will authenticate using your Carthage username and password, NOT your Macintosh credentials.
4. You should now be connected to the network and able to surf the web. Connecting to Carthage-Secure automatically registers your machine on the network for 120 days.
